* Maintenance

- ① Vacuum regularly. Clean with a damp sponge or a perchlorethylene solution.
- ② Vacuum regularly. Treat stains with clean water at a temperature of 60°.
- ③ Soak up stains using an absorbent tissue such as Scottex, then clean with a damp white cloth (soaked in 50% water, 50% alcohol) or a suitable ammonia-based product.

** Resistance to abrasion

- Over the course of time, fabrics become worn as a result of friction.
- The Martindale test makes it possible to measure a fabric's resistance to friction.
- During this test, a machine performs a series of revolutions to replicate the effect of friction and calculates the number of revolutions completed before the fabric's thread is broken.

*** Light fastness

- After prolonged exposure to light, fabrics have a tendency to become discoloured.
- Light fastness tests make it possible to measure a colour's resistance to light.
- Light fastness is measured in accordance with UNI standards on a scale of values ranging from 1 (minimum resistance) to 7 (maximum resistance).

SET OF CASTORS FOR USE ON HARD FLOORS

All our castor-mounted chairs are factory-fitted with castors designed for use on rugs or carpets or with self-braking castors. As an option, they may be fitted with castors designed for use on hard floors. Set of 5 castors, for hard floors.

ROUL5K £ 12
